

## **FOR IMMEDIATE RELEASE**

### **NFL Franchise Minnesota Vikings Selects Aegis Data Security to Provide Data Encryption Solutions**

TROY, Mich – October 20, 2010 -- Troy, Mich.-based Aegis Data Security announced today that it has added National Football League (NFL) franchise the Minnesota Vikings to its growing list of clients for its data encryption suite, AEGIS Data Shield™.

As a large, multi-faceted organization with operations ranging from the football field to the Minneapolis/St. Paul community, the Vikings have similarly robust data security needs. A complete file-level encryption suite, AEGIS Data Shield™ will provide the Vikings' data with security that offers greater flexibility than full-disk security products, is fully transparent to its staff, and extends complete security coverage to outside partners.

“United States businesses as a whole have suffered the loss of over 300 million records at costs nearing seven million dollars per incident,” commented Aegis CEO and President, Matthew Fanto. “The Minnesota Vikings were looking to take a more proactive approach to encrypting their data. Security needs change quickly in such a difficult environment, and we’re proud to provide the next level of security to a forward-thinking organization like the Vikings.”

Aegis Data Security provides software to protect companies from the growing epidemic of data loss. Founded in 2008 by Mr. Fanto, formerly of the National Institute of Standards and Technology (NIST), Aegis Data Security has created its flagship product to be the most robust, easiest-to-use encryption product on the market.
